

Pip – voice AI with a cartoon sidekick

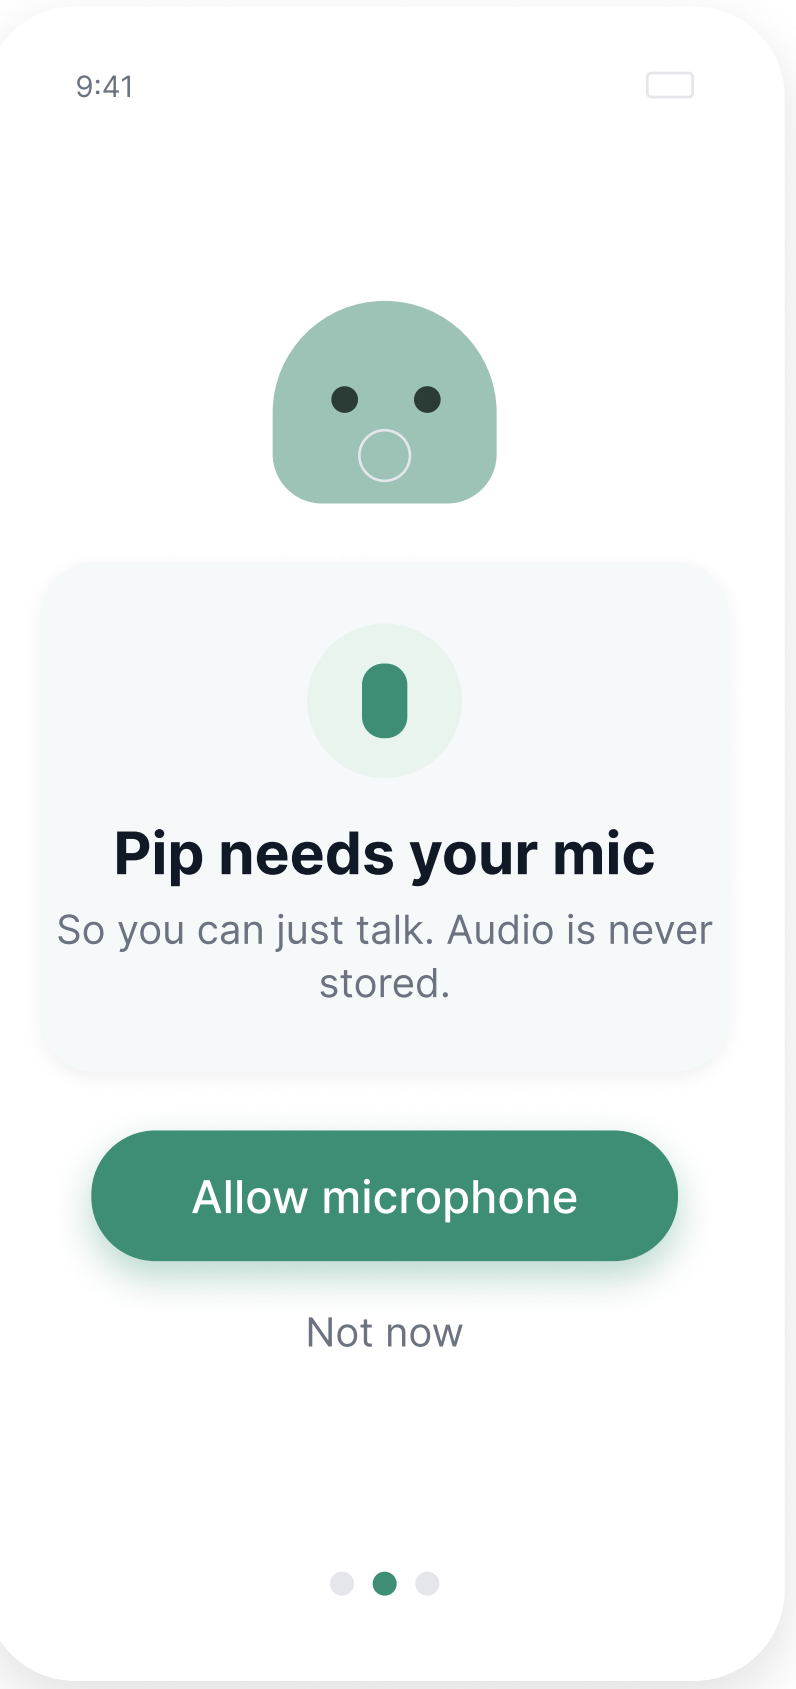

Low-fi wireframe explorations · mobile · calm & friendly · tap → speak → Pip reacts

01 · Onboarding – keep it ≤3 steps, skippable

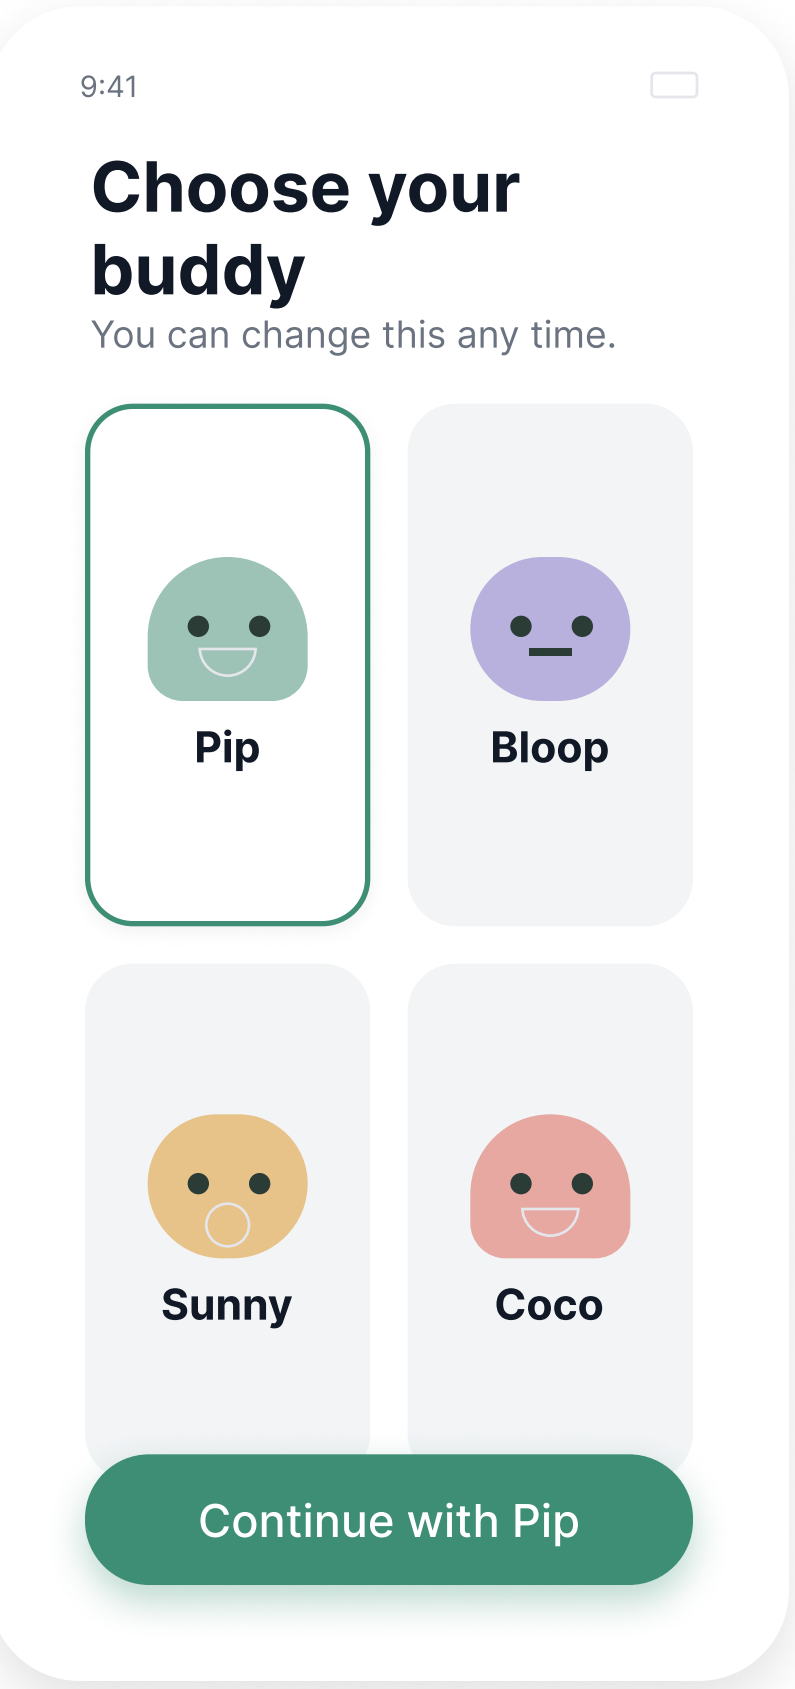

A · meet your sidekick

B · mic permission

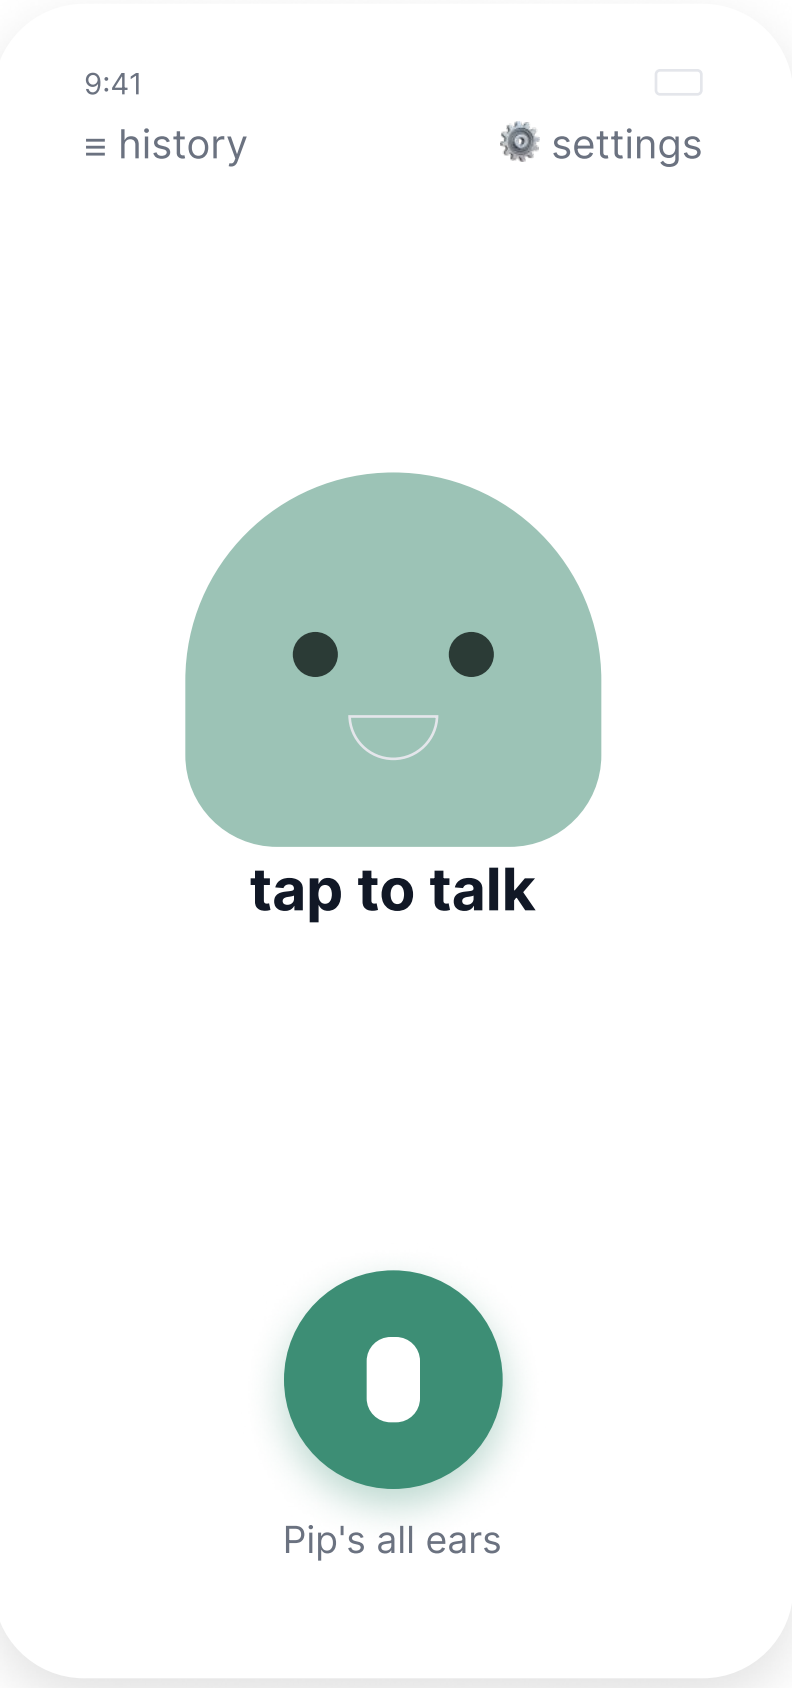

C · pick a buddy

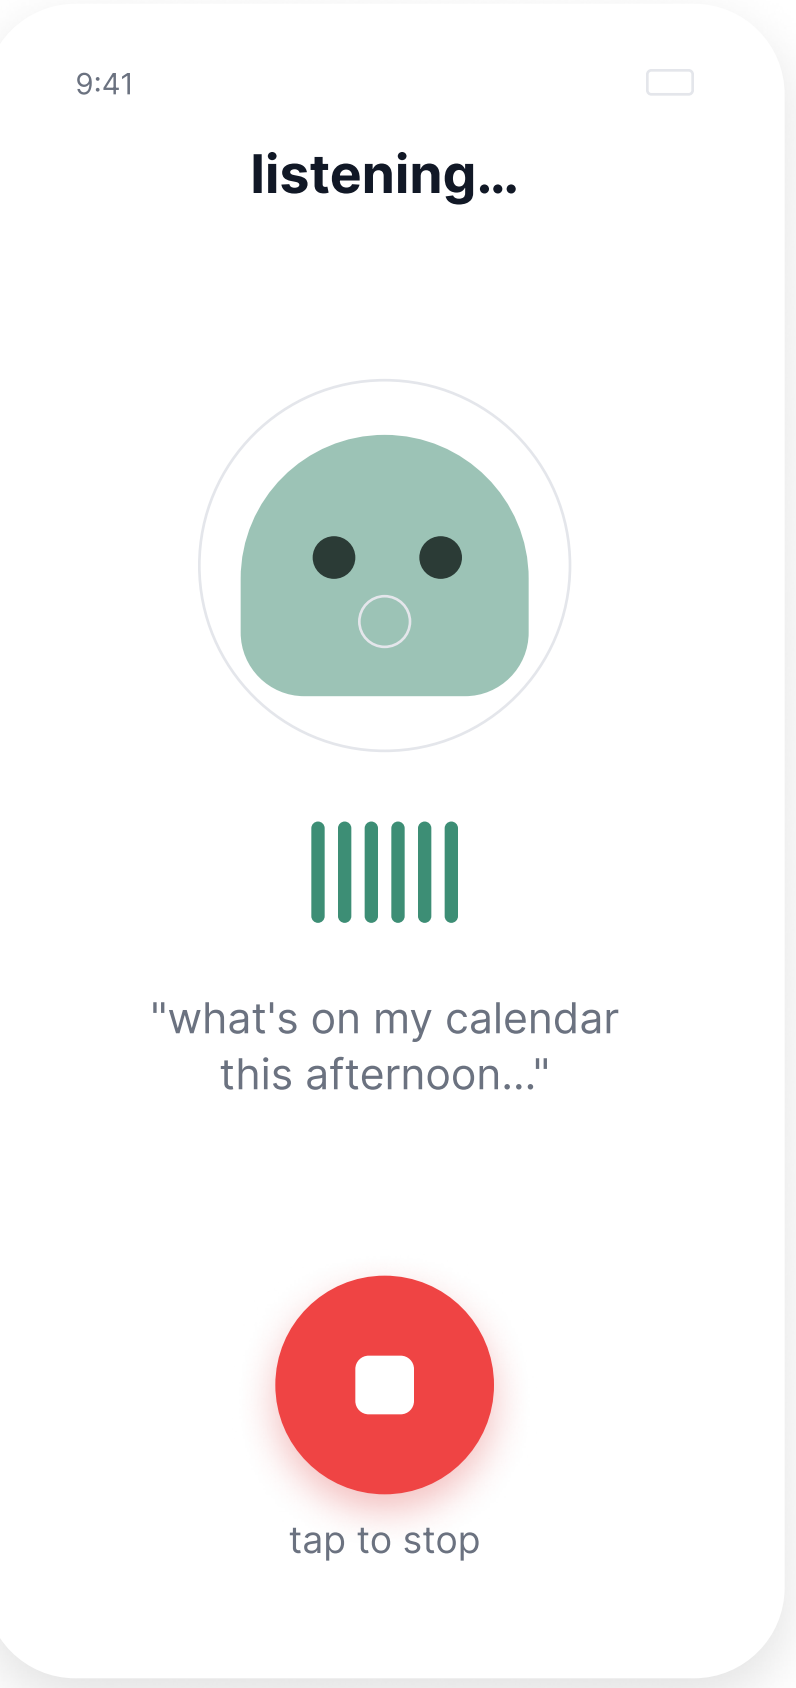

02 · Core loop – Approach A: blob center stage

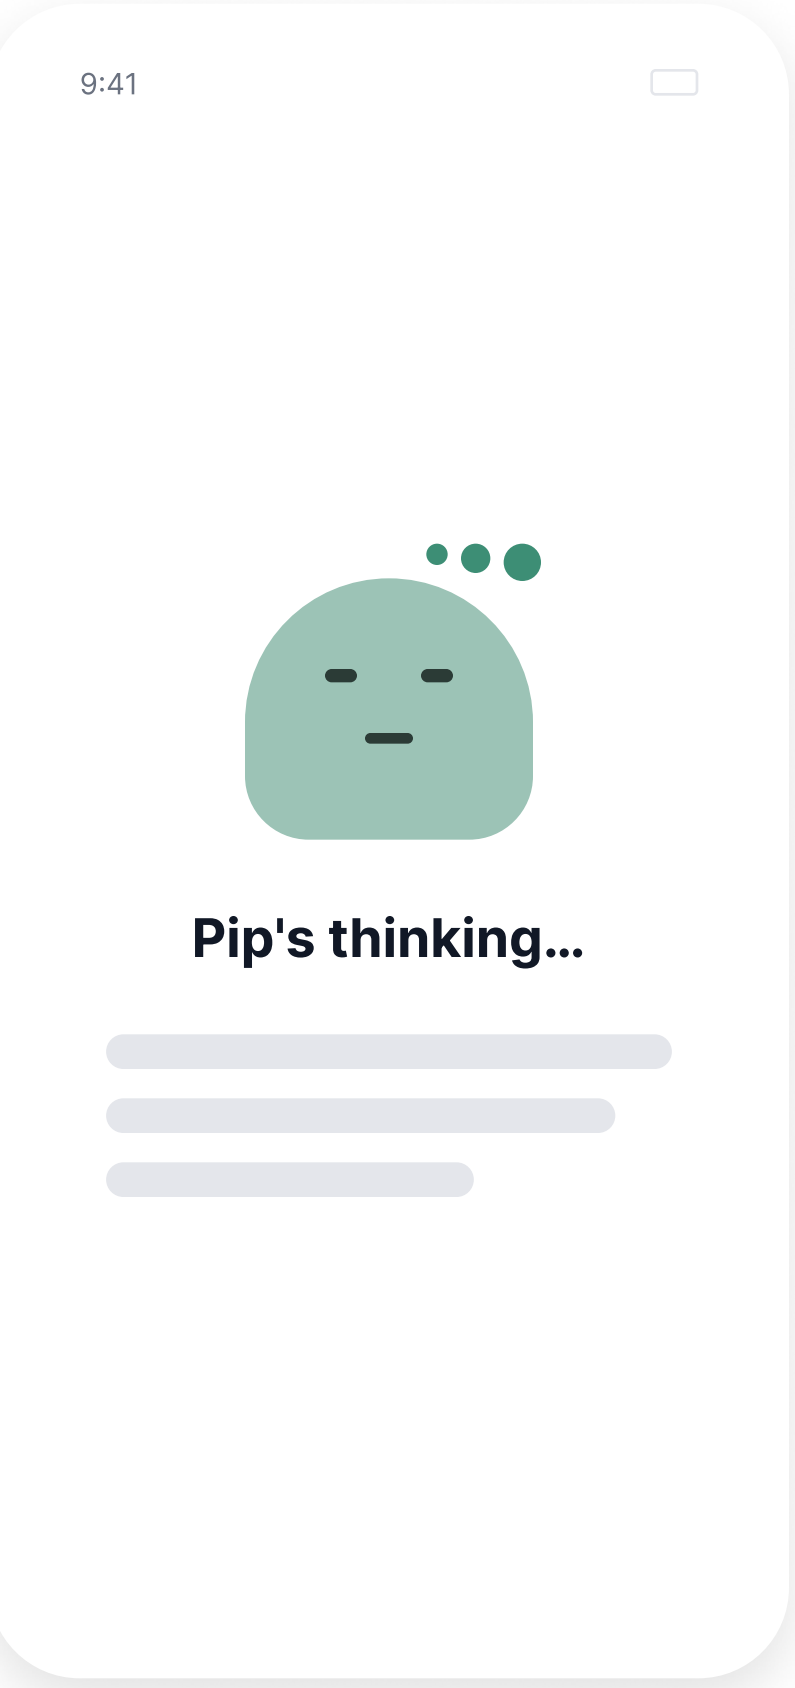

idle

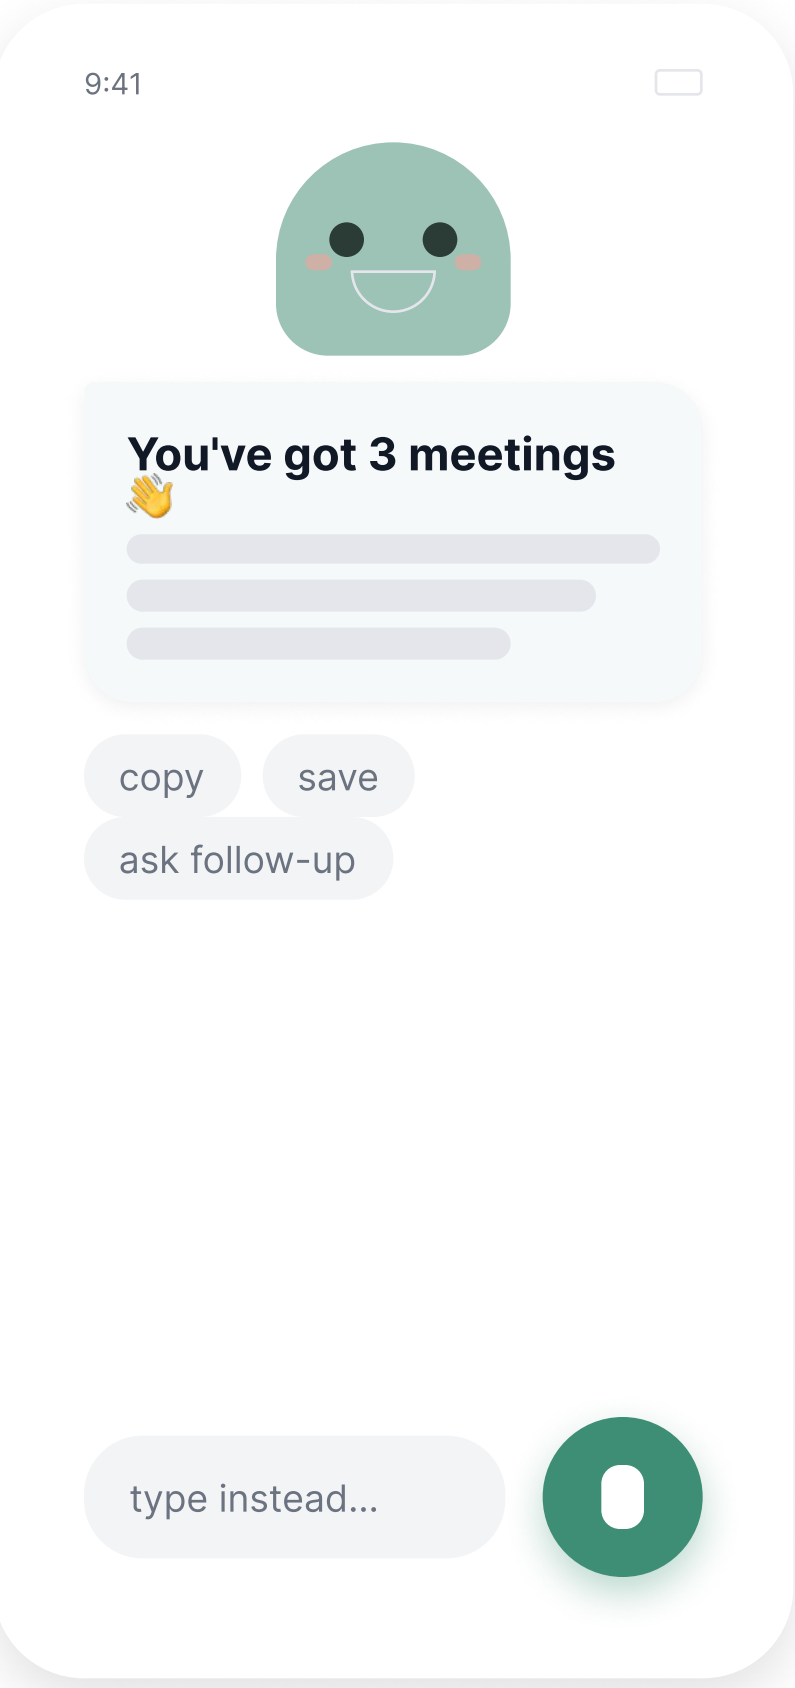

listening

thinking / processing

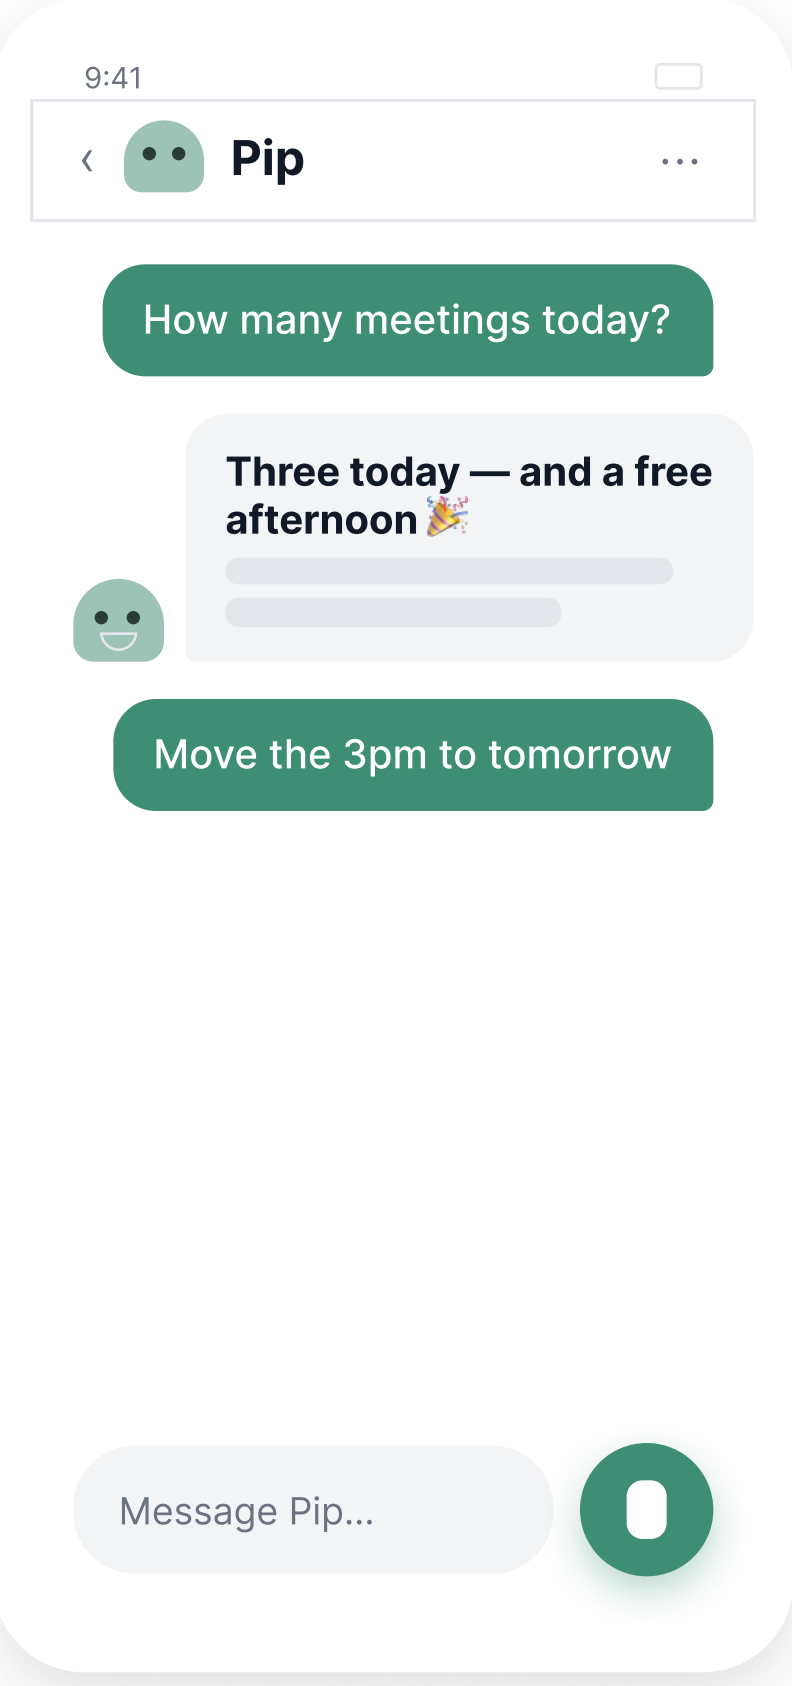

Pip responds

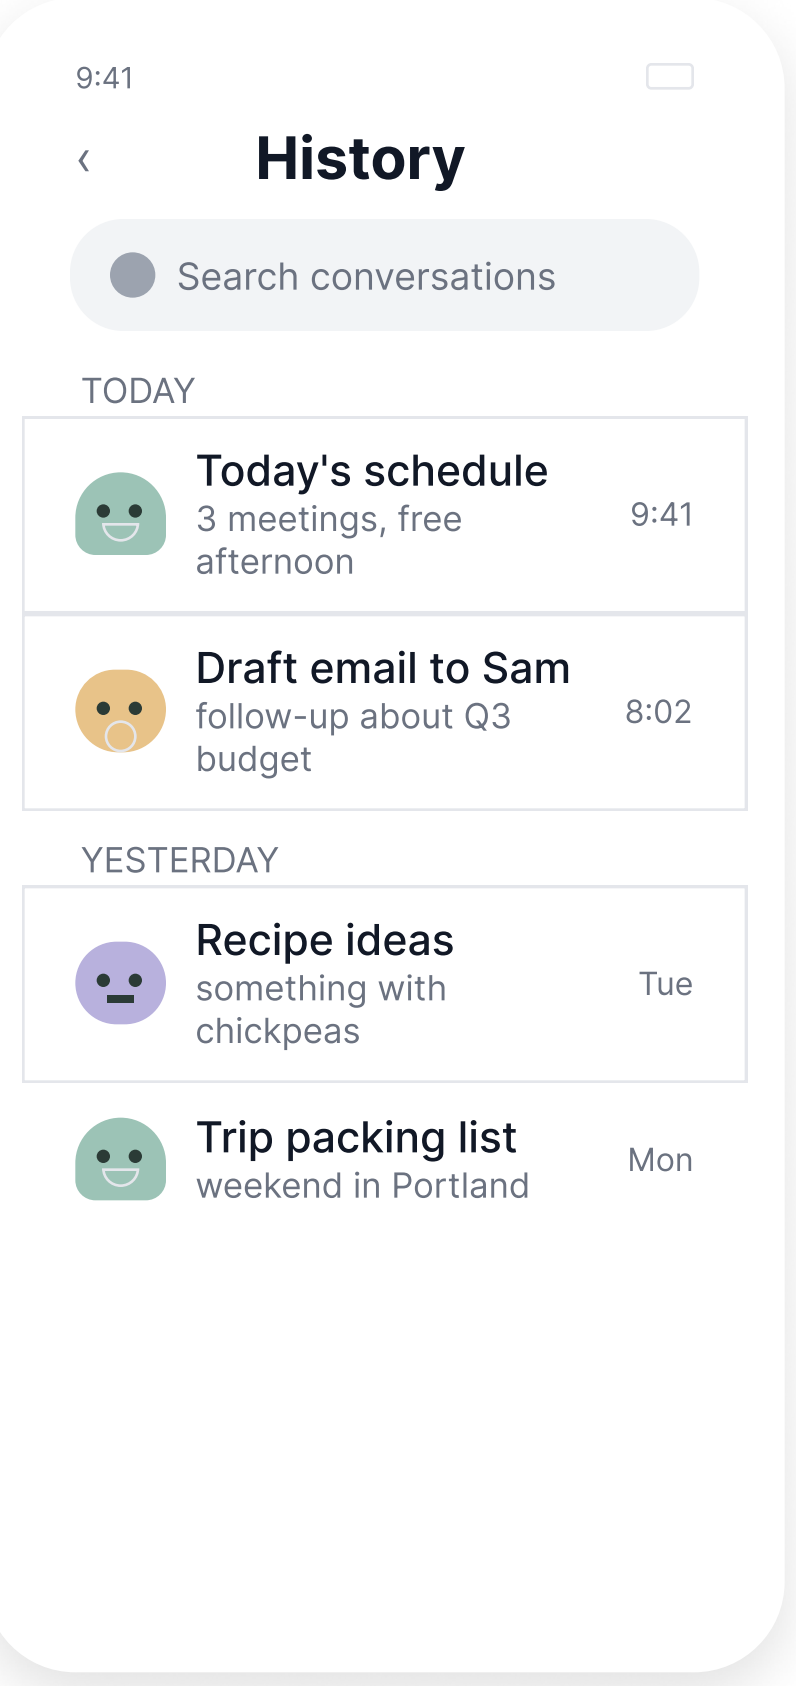

03 · Alternative layouts – same loop, different framing

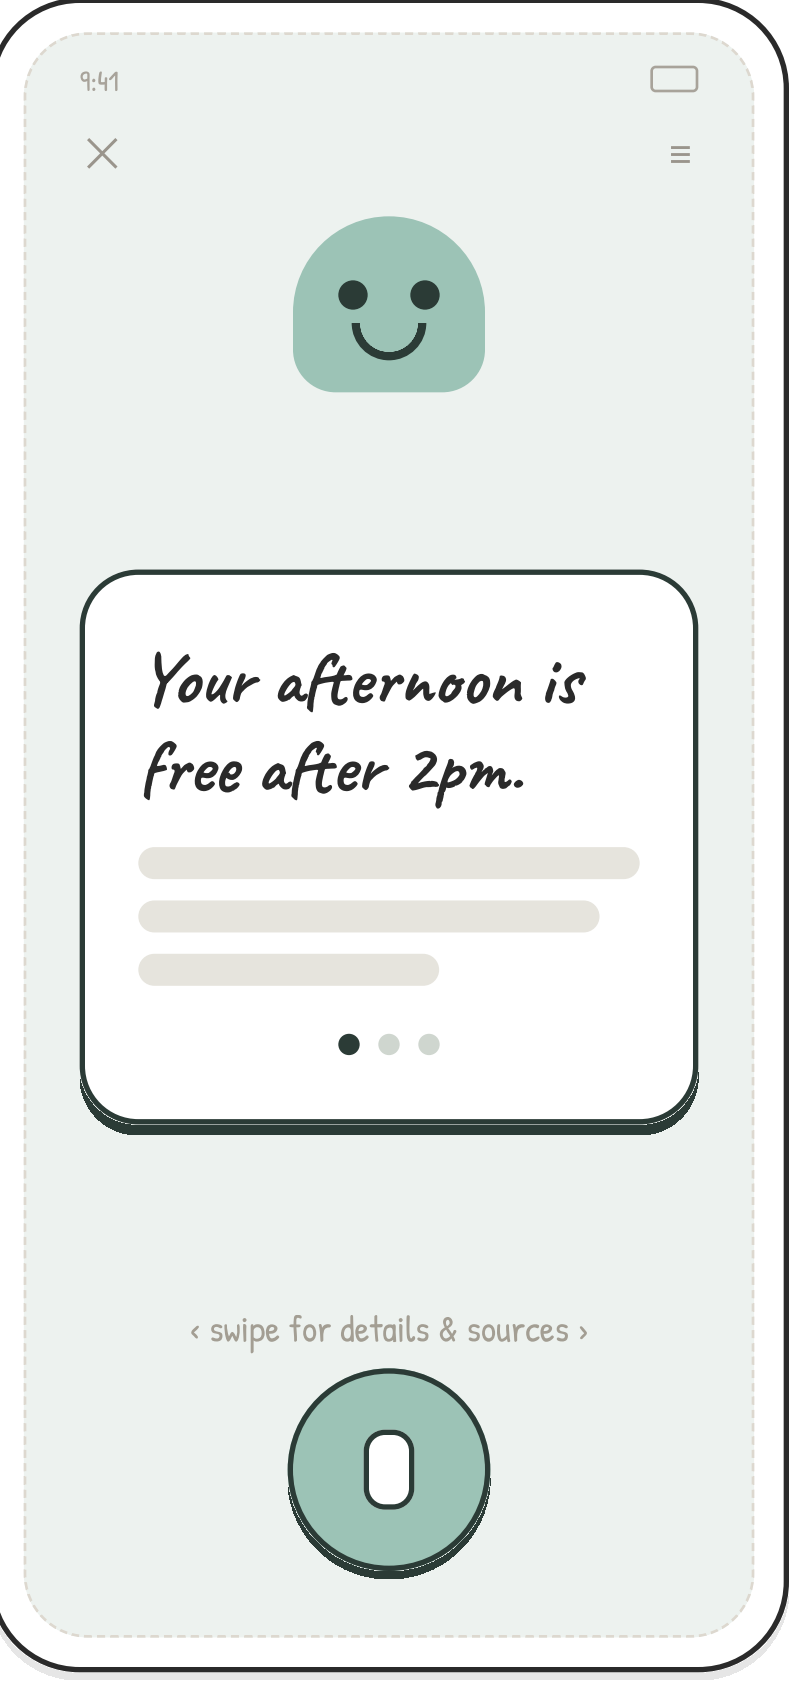

B · chat-first (familiar)

conversation history

C · focus card (one thing at a time)

Pip's face carries the state — eyes + mouth change for listen / think / react. No text needed to feel alive.

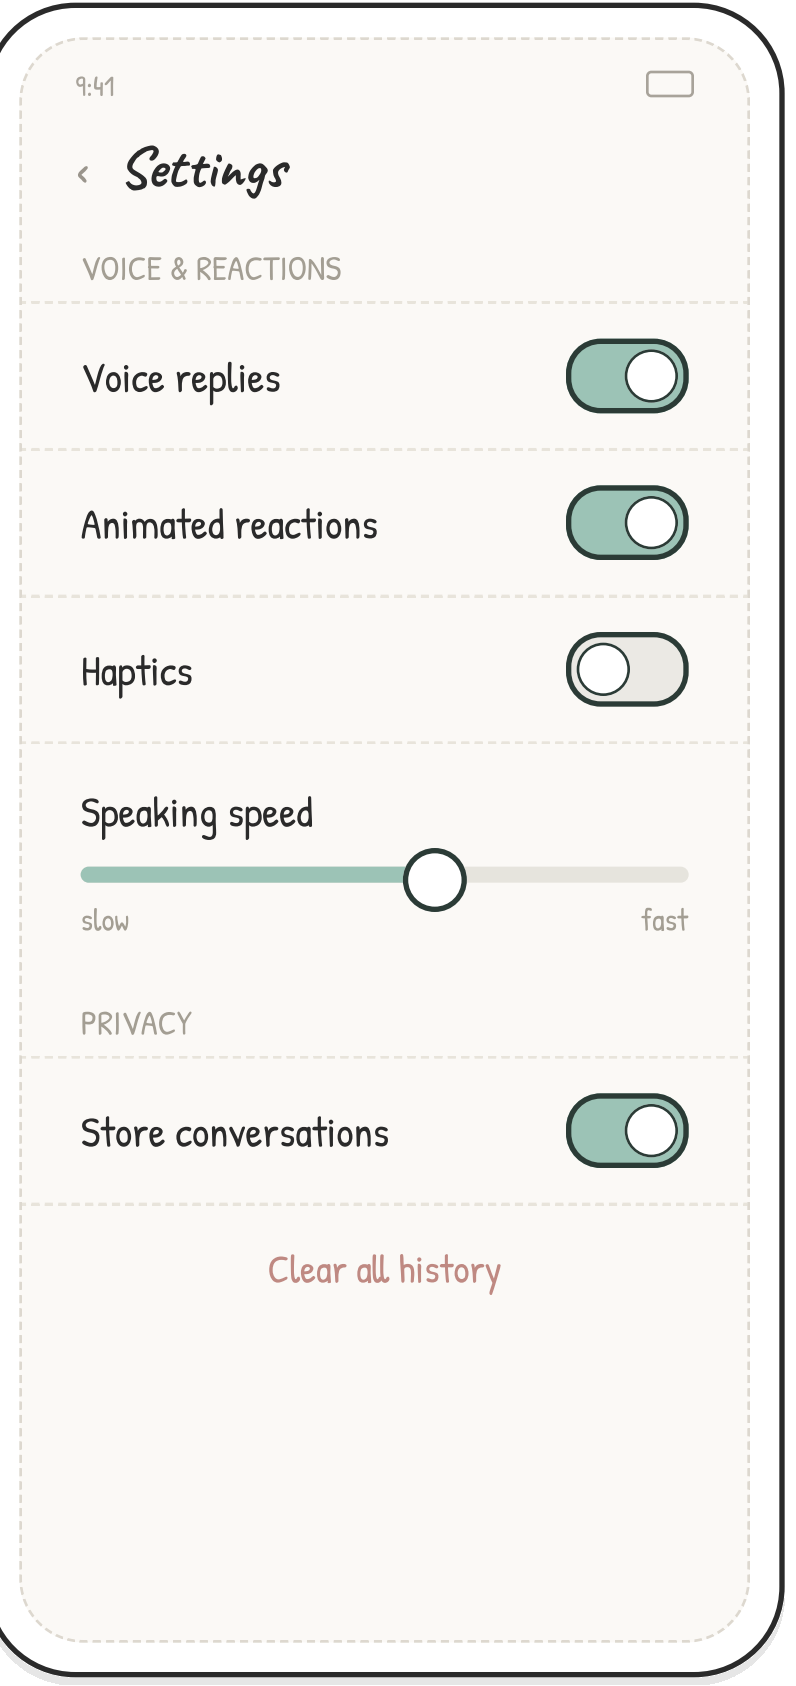

Chat-first = familiar & scannable. Focus card = calmer, less overwhelm. A/B these two.

04 · Settings & character picker

character picker

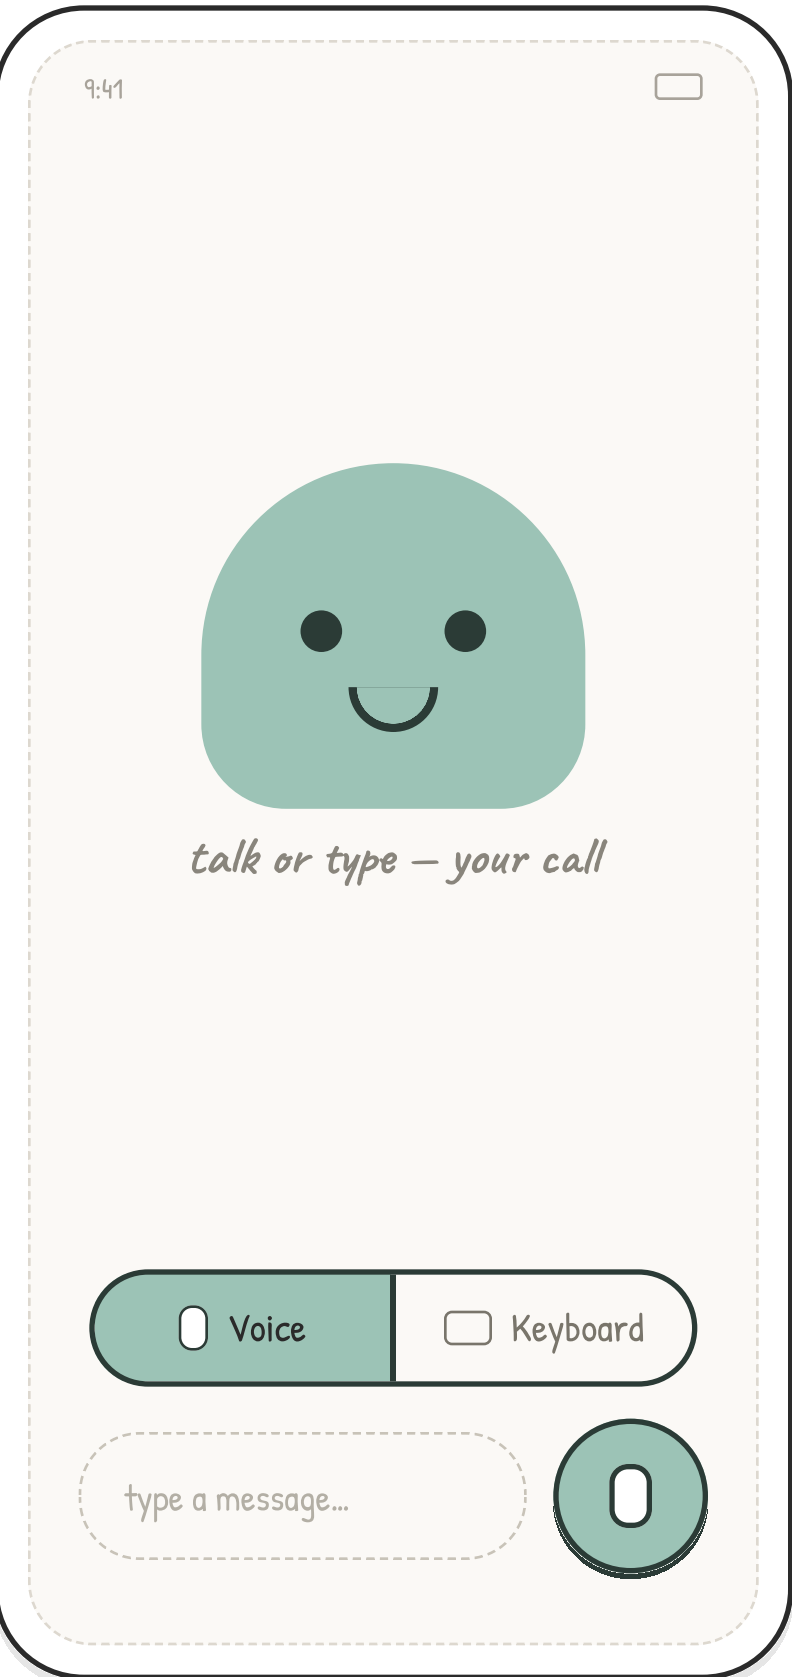

settings

Next: pick one core-loop direction (A / B / C) and I'll take it to hi-fi with motion specs for each Pip reaction.

05 · Input modes – mic + chat

A · choose mic or type

B · user typing → Pip waits patiently

Two different faces:
· Thinking (sec 02) = squint + rising dots, Pip is working.
· Waiting (here) = relaxed closed eyes + soft smile while you type. Calm, never rushing.
